U.S. import statistics are compiled from information verified by Customs Import Specialists on import entries filed with Customs by importers. Under the direction of Vernon D. Acree, Commissioner of Customs, the primary responsibility for the verification of import statistical information is assigned to the field under the technical direction of the Division of Appraisement and Collections.

EXPLANATION OF STATISTICS

Imports of Commodities Based on the Standard Industrial Classification

Purpose and Scope

In this publication the import data, which are initially compiled under the approximately 10,000 classes of the Tariff Schedules of the United States Annotated (TSUSA), are arranged and summarized into about 1,700 classes of a commodity classification based on the origin of production, that is, within industries[1] primarily responsible for their output. This rearrangement of the import data into a structure related to the origin of production should facilitate the comparison by commodities of the U.S. import statistics with other data related to the domestic economy.

Since imports were originally compiled in terms of an unrelated commodity classification (the TSUSA), a complete and precise presentation of imports in terms of the output commodity classification based on the SIC is not possible. However, this arrangement does identify for the user the import data which are most comparable to output data for individual commodities, and presents the information in convenient form for such further summarization as he finds appropriate for his purpose.

It should be emphasized that the import data thus derived relate to imported commodities organized within the domestic industry classifications of the SIC and that statistics on commodity output (classified in terms of the TSUSA) and those on industrial activity of individual domestic industries seldom bear a one-to-one relationship even though measured within the same general framework.

The Product Classifications Used in This Report

For the purpose of relating import statistics to production data compiled under the SIC system, the 5-digit product classes of the Numerical List of Manufactured Products, 1972 Census of Manufactures (MC72-1.2) were used as the starting point for manufactured products. The 4-digit industries of the SIC subdivided into 5-digit homogeneous classes of commodities were used as the starting point for nonmanufactured products. However, in relating the TSUSA classifications to such an SIC-based output product classification there were instances where overlaps in these two classification systems made it necessary to assign some TSUSA commodity numbers to SIC-based output product classifications on the basis of judgment.

TSUSA commodity numbers often include items which should be classified in two or more SIC output product codes. In cases where a judgment could be made that the TSUSA classification could be assigned to the SIC output product code in which its principal content appeared to belong without significantly overcounting the classification to which it was assigned or significantly undercounting others in which it partly belonged, such an assignment was made. Where it appeared that assigning the entire content to a single SIC output product code would seriously distort the import data under one or more such codes, the output product codes (or those principally affected, if more than two were involved) were combined for purposes of this presentation and the TSUSA number was assigned to the combination. This method of dealing with cases where a direct match could not be made has minimized distortion of the import data under the individual SIC output product codes.

Combinations of output product codes are identified in separate tables in this report entitled "Principal Differences Between the SIC-Based Output and Import Product Codes." In the import product numbering system, a sixth digit was used to identify combinations of 5-digit codes: "O" indicating no combination and the letters A through E representing combinations crossing various levels of the SIC structure. When all of the 5-digit output commodity classes of a 4-digit industry group were combined, the fifth and sixth digits are "XX."

The seventh and eighth digits are further subdivisions of the 6-digit code. Such subdivisions have been made to yield import classifications comparable to output commodity classifications within the framework of the SIC. The SIC-based 8-digit import classes have been selected on the basis of the availability of comparable output data from published government sources.

The descriptions used in this report reflect as closely as possible the actual TSUSA content of the 8-digit item. However, they are necessarily abbreviated and therefore do not contain all of the qualifying information necessary to define clearly the commodity for which statistics are shown. For complete definitions of the individual SIC-based import product classifications, reference should be made to the definitions of the TSUSA classifications included.

[1] Standard Industrial Classification Manual, 1972, issued by the Office of Management and Budget.

Relationship Between the Import and Export SIC-Based Product Codes

Annual export data comparable to the import statistics in this report are published in FT 610, U.S. Exports of Domestic Merchandise, SIC-Based Products and Area. The export data, originally compiled in accordance with about 4,000 classifications listed in Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States, are rearranged and summarized into approximatley 2,200 SIC-based export product codes.

The export classes were derived from the Standard Industrial Classification in the same manner as the import classes presented in this publication. However, since the import classes were derived from the TSUSA and the export classes from Schedule B, it was not always possible to establish identical classifications for both imports and exports. Nor was it possible to assign commodity code numbers so that identical numbers in the two reports would in all cases reflect identical coverage. When comparisons are made between the import data in this report and the export data in FT 610, further information regarding the coverage of the SIC-based product codes should be obtained by referring to the definitions of the individual import TSUSA classifications and export Schedule B classifications included under the SIC-based product codes.

Related Information

A tabulation identified as IA-276, U.S. Imports for Consumption and General Imports, SIC-Based 8-digit Product Code by Country of Origin, is prepared annually for the benefit of those users of the data who may be interested in country of origin rather than area detail for the SIC-based commodity classifications used in this report. Copies of this tabulation are available for reference use at Department of Commerce Field Offices located in principal cities.

The Bureau has, since 1958, been publishing an annual report entitled U.S. Commodity Exports and Imports as Related to Output. In a single publication, this report relates both exports and imports to output on a consistent basis. It also annotates the comparisons, indicating noncomparabilities and variations in actual and intended content. The import data shown therein are derived from the SIC-based import commodity data of this Report FT 210, using the same commodity detail or aggregating as appropriate.

Additional information regarding the sources mentioned above may be obtained from the Bureau of the Census.

SOURCE OF IMPORT STATISTICS

The official U.S. import statistics are compiled by the Bureau of the Census from copies of the import entry and warehouse withdrawal forms which importers are required by law to file with Customs officials. The information as to country of origin, net quantity, value, and commodity classification is verified by Cutoms officials on entries filed for transactions valued over $250, which are ordinarily subject to examination for Customs appraisement purposes. The statistical copy of the entry is corrected if it does not accurately reflect the information called for by the statistical requirements. Information on warehouse withdrawals, which account for approximatley 4 percent of the total vlaue of imports for consumption, while not subject to the verification procedure directly, should be improved indirectly (due to education of importers/brokers) by the verification of the warehouse entries to which they correspond.

Coverage of the Import Statistics

The import statistics reflect both government and nongovernment imports of merchandise into the U.S. Customs area (includes the 50 States, the District of Columbia, and Puerto Rico) without regard to whether the importation involves a commercial transaction. The statistics exclude the following: Shipments between the United States and Puerto Rico, between the United States and its possessions (including the Virgin Islands), and between these outlying areas; imports into U.S. possessions; American goods returned to the United States by U.S. Armed Forces; intransit shipments through the United States; shipments not considered to be imports for statistical purposes or shipments of relatively small significance in terms of total value or statistical importance, such as personal and household effects, temporary imports, and low-valued nondutiable imports by mail; issued monetary coins of all component metals; and gold in the form of ores, concentrates, waste and scrap, and refined bullion. Silver in these forms is included, effective with the statistics for January 1969.

GENERAL IMPORTS/IMPORTS FOR CONSUMPTION

Imported merchandise is reported as "General Imports" and "Imports for Consumption." General imports are a combination of entries for immediate consumption and entries into Customs bonded warehouses. With certain exceptions as indicated above, these data reflect total arrivals of merchandise, whether such merchandise enters consumption channels immediately or is entered into warehouses under Customs' custody to be subsequently withdrawn for consumption or withdrawn for exportation. The general import statistics, therefore, reflect merchandise entered for immediate consumption ("duty free" merchandise, merchandise onwhich duty is paid on arrival, and merchandise entered into Customs bonded manufacturing warehouses for processing and subsequent export of the main product) plus merchandise entered into Customs bonded storage warehouses and Customs bonded smelting and refining warehouses.

Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. With certain exceptions as indicated above, these data reflect the total of commodities entered into U.S. consumption channels. Imports for consumption statistics include merchandise entered for immediate consumption (as parenthetically explained above) plus merchandise withdrawn from Customs bonded storage warehouses for consumption, merchandise withdrawn from

Customs bonded smelting and refining warehouses, and merchandise transferred from Customs bonded storage warehouses to Customs bonded manufacturing warehouses for manufacturing and export.

MONTHLY AND ANNUAL CARRYOVER

It is the objective of the compiling procedures to include shipments, insofar as practicable, in the statistics for the actual month of importation. However, for purposes of the statistics the month of importation is based on the date of the import entry or warehouse withdrawal document. This may not in all cases correspond to the actual month of importation. (For example, under the Customs "immediate--delivery" procedures, importers may file the import entry up to 10 workdays after the actual date of importation.) Also, because of processing problems (e.g., late receipt of a document for an end-of-month shipment, rejection of a shipment by the computer because the data fail to meet certain edit criteria established to protect the accuracy of the statistics, etc.), there is an overall average carryover of about 7 percent (in terms of value) of the shipments from the reported month of importation (based on the date of the import entry or warehouse withdrawal document) to a subsequent month, usually the succeeding month. In addition, as a result of the aforementioned Customs "immediate-delivery" procedures, there is a further carryover of presently unknown magnitude from the actual month of importation to a subsequent month.

From year to year, the amount of carryover has been found to remain substantially constant so that comparisons of overall totals from period to period are generally not affected. For individual commodities, however, the carryover procedure may distort yearly comparisons, since the commodity data for a given year may include some imports actually made during the previous year, without a carryover to the following year of a corresponding amount of imports of that particular commodity.

IMPORT VALUATION

The Customs value shown in this report respresents the value of imports as appraised by the U.S. Customs Service in accordance with the legal requirements of Sections 402 and 402a of the Tariff Act of 1930, as amended. It may be based on the foreign market value, export value, constructed value, American selling price, etc. It generally represents a value in the foreign country, and therefore excludes U.S. import duties, freight, insurance, and other charges incurred in bringing the merchandise to the United States. This valuation is primarily used for collection of import duties and frequently does not reflect the actual transaction value.

AREA OF ORIGIN

This report presents information on imports of commodities into the United States from major world areas. The areas represent groupings of individual countries, with the exceptions of Canada, the United Kingdom, and Japan which are treated as separate areas. A listing of the areas and the individual countries included in each area is contained in this report. A complete list of the countries together with a description of the adjacent provinces, territories, islands, or other areas considered to be a part of the country for statisticial purposes is presented in Schedule C, Classification of Country Designations for U.S. Foreign Trade Statistics. Copies of Schedule C may be obtained from the Bureau of the Census, Washington, D.C. 20233.

The area of origin, as shown in this report, reflects the summarization of the information reported by importers or their brokers regarding the country of origin of individual import shipments. The country of origin is defined as the country where the merchandise was grown, mined, or manufactured. In instances where it is known that the country of origin cannot be determined, the transactions are credited to the country of shipment.

ESTIMATED DATA FOR LOW-VALUED IMPORTS

During 1974, data on imports valued under $251 reported on both formal and informal entries (informal entries generally contain items valued not more than $250) were estimated from a 1-percent sample. The estimates for these low-valued shipments have been combined and are included along with other items under commodity number 990000 00, "Miscellaneous Commodities, N.E.S." These

Trade area	Approximate sampling variability (dollars)
Western Hemisphere	± 1,605,000
Canada	± 1,335,000
Twenty Latin American Republics	± 855,000
Central American Common Market	± 147,000
Latin American Free Trade Association	± 810,000
Other Latin American Republics	± 184,500
Other Western Hemisphere	± 270,000
Western Europe	± 2,205,000
Organization for Economic Cooperation and Development	± 2,190,000
European Economic Community	± 1,545,000
Original EEC Countries	± 1,455,000
United Kingdom	± 1,155,000
Other EEC Countries	± 885,000
Other OECD Countries	± 510,000
Other Western Europe	± 162,000
Communist Areas in Europe	± 165,000
Asia	± 1,650,000
Japan	± 1,155,000
Other Asia	± 1,185,000
Near East Asia	± 240,000
South Asia	± 255,000
Asia, n.e.c.	± 1,140,000
Australia and Oceania	± 270,000
Africa	± 204,000
Unidentified Areas (Countries)	± 660,000

estimates are excluded from the data for other commodity numbers. The statistics for commodity codes from which the low-valued shipments are excluded are undercounted to the extent that such low-valued shipments of the particular commodity are made.

The total value so excluded generally amounts to about 1 percent of the yearly import total. The estimated value totals for commodity number 990000 00 are subject to variability because a sample was taken. For any given trade area shown under commodity number 990000 00, the approximate sampling variability may be found by reference to the table shown on the following page. As an example the figure in the sampling variability column for Japan is $1,155,000. This means the chances are better than 2 out of 3 that a complete tabulation would have resulted in a figure within about $1,155,000 of the total shown for commodity number 990000 00 for Japan.

SOURCES OF ERROR IN THE STATISTICS

Import figures are subject to the possibility of errors which may arise from various sources. Among these are errors in the reporting and/or processing of information as to commodity classification, net quantity, value and other statistical factors, month or year of inclusion in the statistics (see the explanation regarding Monthly and Annual Carry-over, above), and errors which may result from the sampling of shipments valued under $251. (See the explanation regarding Estimated Data for Low-Valued Imports.) As indicated above under Source of Information, the information as to net quantity, value, commodity classification, and country of origin is verified by Customs officials on entries filed for transactions valued over $250 which are ordinarily subject to examination for Customs appraisement purposes, thus considerably reducing the possibility of error. In addition, the procedures used to compile the statistics include clerical and computer processing checks designed to protect the accuracy of the statistics to the fullest practicable extent.

SOURCES OF FURTHER INFORMATION ABOUT FOREIGN TRADE STATISTICS

Summary import and export statistics are presented in the monthly issues of Report FT 900, Export and Import Merchandise Trade, and in Report FT 990, Highlights of U.S. Export and Import Trade. More detailed monthly and cumulative import commodity data are presented in Report FT 135, U.S. General Imports, Schedule A Commodity by Country. Annual data are presented in Report FT 150, U.S. General Imports, Schedule A Commodity Groupings, World Area, Country, and Method of Transportation; Report FT 155, U.S. General Imports, World Area, Country, Schedule A Commodity Groupings, and Method of Transportation; and Report FT 246, U.S. Imports for Consumption and General Imports, TSUSA Commodity by Country. Further information regarding the foreign trade statistics program is contained in the Guide to Foreign Trade Statistics. The Guide contains and explanation of the coverage of the statistics and sample illustrations of the content and arrangement of the data presented in individual reports and tabulations.

Supplementary information and explanations of interest to users of foreign trade statistics (such as notices of changes in types of shipments covered by current statistics, unusual shipments, problems of valuation and classification, changes in statistical procedures, etc.) are included as special announcements in current issues of the statistical publications. Copies of foreign trade reports and tabulations are available for public reference use at Department of Commerce field offices and other reference locations. Reports providing additional detail compiled but not published can be obtained on a cost basis.

A discussion of the history of foreign trade statistics, containing references to additional sources of historical trade data, appears in Historical Statistics of the United States, published by the Bureau of the Census. Copies are available at most libraries.

For further information regarding the foreign trade statistics, request should be made to the Foreign Trade Division, Bureau of the Census, Washington, D.C. 20233.

[1]Symbols used in the SIC-based import numbers represent combinations of two or more whole 5-digit SIC product classes, as follows:

A - all within the same 4-digit class,
B - all within the same 3-digit but some different 4-digit classes,
C - all within the same 2-digit but some different 3-digit classes,
D - all within the same division but some different 2-digit classes,
E - within different divisions,
X - all 5-digit classes with the same 4-digit (or 3-digit) are included.

[2]Import data in this detail are not available.

[3]"X" does not indicate a combination and is used only as an instrument to obtain the desired numbering sequence.

[4]Part of this SIC-based output product code is assigned to other SIC-based import product codes.

Table 2. **Principal Differences Between the SIC-Based Output and Import Product Codes: 1974**—Continued

Part B. SIC-Based Output Product Code Arrangement—Continued

[1]Symbols used in the SIC-based import numbers represent combinations of two or more whole 5-digit SIC product classes, as follows:

A - all within the same 4-digit class,
B - all within the same 3-digit but some different 4-digit classes,
C - all within the same 2-digit but some different 3-digit classes,
D - all within the same division but some different 2-digit classes,
E - within different divisions,
X - all 5-digit classes within the same 4-digit (or 3-digit) are included.

[2]Import data in this detail are not available.

[3]"X" does not indicate a combination and is used only as an instrument to obtain the desired numbering sequence.

[4]Part of this SIC-based output product code is assigned to other SIC-based import product codes.

REVISIONS IN CALENDAR YEAR 1973 DATA

Revisions in data previously published in the 1973 calendar year issue of Report FT 210 are shown in the following section. These revisions are given on a calendar year basis in SIC-based product code by world area of origin arrangement and in terms of net amounts to be added to or subtracted from the published figures. Data followed by a minus sign (-) are to be subtracted; other data are to be added.

Revisions in Calendar Year 1973 Data

(Data followed by a minus sign (-) are to be subtracted; other data are to be added)
